DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 21-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Norman et al. (U.S. Patent 6,049,533).

For claims 21, 28 and 29, Norman et al. disclose network communication system with information rerouting capabilities comprising:
creating the IP packet comprising:

a virtual internet protocol address corresponding to a plurality of physical end nodes served by an access point (figure 9, col. 12 lines 47-59 and col. 17 lines 29-47);
and

a data field comprising:

a destination identification corresponding to one of the physical end nodes of the plurality of physical end nodes, said one of the physical end nodes being a destination for the IP packet (figure 8, col. 12 lines 50-57); and

user data (col. 12 lines 57-59);

sending the IP packet over a first RF network to the first access point (figure 9, col. 18 lines 3-5).

wirelessly transmitting, by the first access point, the IP packet to a second access point (col. 18 lines 3-21);

alternatively transmitting by the first access point the IP packet to a second network, the second network being wired (figure 2, col. 7 lines 11-17);

decoding, by the plurality of physical end nodes, the data field of the IP packet (figure 3, col. 7 line 56 to col. 8 line ; and

determining by each of the plurality of physical end nodes whether it is the destination for the IP packet (col. 18 lines 3-21).

For claims 22-27, Norman et al. disclose the step of determining is accomplished by each of the physical end nodes comparing their own identity with the destination identification in their user data of the IP packet (figure 9, col. 17 line 29 to col. 18 line 50).

Response to Arguments

3. Applicant's arguments filed on April 30, 2002 have been considered but are moot in view of the new ground(s) of rejection.
